As of May 31, 2024

COMMENTARY

- It is hard to shake the idea after some of the longest periods of “Expensive” and “Rising Expensive” narrative signals we have observed over the last 10 years that market participants are internalizing the expensive valuations of tech stocks (read: NVIDIA) and the silliness of meme stocks as a wall of worry.
- What we mean by this is that the entire market is fixated on NVIDIA, that everyone thinks it’s wildly expensive, AND that everyone is thrilled to find opportunities to “allow” developments in AI, statements from politicians, or reports from the companies themselves to give them “comfort” that maybe that wall of worry is no big deal.
- This cynicism seems to be mirrored by the agitation to frame the economy as being bound for recession and the need for dovish monetary policy to be positively urgent. It is a “negative-framing-to-provoke-positive-responses-at-the-margin” market for narratives across the board.
- Outside of NVIDIA and this recession/dovish clamoring, it is shocking how little coherent narrative exists anywhere in US equity markets at the moment. The polynarrative moment that was so prevalent over the last 18 months seems to have faded into something much closer to a mononarrative.

SIGNAL VALUES AS OF MAY 31, 2024

SIGNAL CATEGORY	SIGNAL STATE	DIRECTION
Central Bank Policy	Dovish	Bullish
Stock Story Types	Valuation-Focused	Neutral
Cheap Narrative	Neutral	Neutral
Expensive Narrative	Neutral	Neutral
Cheap vs. Expensive	Expensive	Bearish
Fading Expensive Narrative	Neutral	Neutral
Rising Expensive Narrative	Neutral (New)	Neutral
Bullish Narrative	Neutral	Neutral
Bearish vs. Bullish	Neutral	Neutral
Aggregate View		Slightly Bullish

Important Disclosures: These signals are provided for research purposes only and have not been customized to the specific circumstances of any client. There can be no guarantee that any investment strategy based on these signals would be successful, or that their success in the past would be indicative of similar success in the future. Investors should consider a wide range of factors specific to their portfolio and circumstances before making any investment decisions. The S&P 500 is a market cap-weighted index of approximately US large capitalization stocks. These signals and triggers are historical simulations. They did not exist in the periods examined. While efforts to examine economically intuitive relationships are core to our process, knowledge about the past inevitably skews the creation of such models. You should examine their results with skepticism and care. Past performance is NOT a guarantee of future results.

As of May 31, 2024

SIGNAL REFERENCE—CENTRAL BANK POLICY

This model examines the Density and Narrative Strength / Attention of certain archetypal narratives relating to Central Bank Policy. We classify the dominant narrative among five such archetypes, which we believe reflect different states of common knowledge that both respond to and influence investor behavior. Present archetypes include Dovish, Hawkish, Inflation-Focused, Unemployment-Focused and Fed Put. Historical subsequent period results for directional S&P 500 exposure and historical states for the model are presented below.

US DIRECTIONAL EQUITY DASHBOARD

As of May 31, 2024

SIGNAL REFERENCE—STOCK STORY TYPES

This model examines the Density and Narrative Strength / Attention of certain linguistic archetypes of investment theses promoted in financial media and by sell side research houses. We think there are three such archetypes: multiples-focused, technicals-focused or fundamentals-focused. That is, analysts and commentators tend to describe why investments are attractive or unattractive using one or more of those linguistic sets. We think the market's varying tendency to frame investment outcomes in terms of each of these archetypes is indicative of risk appetites.

US DIRECTIONAL EQUITY DASHBOARD

As of May 31, 2024

SIGNAL REFERENCE—EXTREME CHEAP NARRATIVE

This model examines the Density and Narrative Strength / Attention of narratives describing the stock market in general as being inexpensive, cheap or a “good value.” We believe that extreme values for these language patterns may be predictive of marginal investor buying behaviors and above average forward-looking excess returns for equity markets, sectors and individual securities. **The signal indicates LONG S&P 500 exposure on an extreme value.**

US DIRECTIONAL EQUITY DASHBOARD

As of May 31, 2024

SIGNAL REFERENCE—CHEAP VS. EXPENSIVE

This model examines the relative deviation of the Density and Narrative Strength / Attention of narratives describing the stock market as being cheap and expensive, respectively, relative to their historical norms. In short, we believe that the *relative dominance* of cheap archetypal language over expensive archetypal language may be predictive of investor risk-taking behaviors above and beyond the raw value of the density and influence of cheap language itself. **The signal indicates LONG or INCREASED S&P 500 exposure on an extreme value differential in favor of Cheap language.**

US DIRECTIONAL EQUITY DASHBOARD

As of May 31, 2024

SIGNAL REFERENCE— FADING EXPENSIVE NARRATIVE

This model examines the rate of change of the Density and Narrative Strength / Attention of narratives describing the stock market as being expensive. In short, we believe that sharp rates of change in the use of archetypal language in favor of cheapness may be predictive of investor risk-taking behaviors above and beyond the raw value of the density and influence of cheap language itself. **The signal indicates INCREASED S&P 500 exposure on a rapid shift away from Expensive archetypal language.**

US DIRECTIONAL EQUITY DASHBOARD

As of May 31, 2024

SIGNAL REFERENCE— BEARISH VS. BULLISH

This model examines the relative deviation of the Density and Narrative Strength / Attention of narratives describing using the tropes and linguistic patterns of bullish and bearish archetypes, respectively, relative to their historical norms. We believe that the *relative dominance* of bearish over bullish archetypes may be indicative of a narrative structure saturated by pessimism in ways that create upside asymmetry to individual assets and risky assets more broadly. The signal indicates LONG or INCREASED S&P 500 exposure on an extreme value differential in favor of Bearish language.

CURRENT STATE

US DIRECTIONAL EQUITY DASHBOARD

As of May 31, 2024

SIGNAL REFERENCE— BULLISH NARRATIVE

This model examines the rate of change of the Density and Narrative Strength / Attention of narratives describing bull cases for individual assets or the market in general. We believe that bull case language tends to gain influence after the case has been demonstrated in market performance—thus, it is the relative absence of bull case narratives that we expect to be moderately predictive of above average returns. **The signal indicates INCREASED S&P 500 exposure on a low density/influence of Bullish archetypal language.**
